Second Edition of Annual 4.5G & 5G Innovation Summit to address the evolution of LTE to 5G

Candid News Bureau : 5 Apr 2017

Nexgen Conferences, one of India's leading conferences & B2B event organizers announces the second edition of Annual 4.5G & 5G Innovation Summit, an international Conference cum exhibition. This conference is going to be held on Wednesday, April 12, 2017 at ITC Maratha in Mumbai.

The summit will enable key telecom industry professionals, stakeholders, thought leaders, analysts and users to feature key trending technologies, network infrastructure and new disruptive innovations needed to strengthen the pillars of next wireless upgrade beyond LTE or 4G.

Taking place throughout the event, the summit will focus more on understanding and analysing current Network infrastructure and its developments, 4G market condition and requirements, Potential role of Small Cells in bringing huge amount of data capacity, Challenges and their respective Solutions in terms of LTE and advanced LTE deployment scenarios, and Leveraging best practises as well as LTE evolution system, among others. It will put strong emphasis on improving network data rate and user experience with high-speed world-wide internet connectivity and advanced LTE network which is highly efficient in spectrum use.

Indian telecom operators are all set to start adopting 5G technology from this year. A research team that has been commissioned by the government to work on 5G technology has already filed 100 patents so far — of which around 10 have already been granted. 5G is capable of delivering speeds of over one I gigabit per second and support several devices at once and the Indian government wants the country to be an early adopter of 5G, which is expected to be commercially rolled out by 2020.

With the advent of next generation smartphones, Cognitive Radio, four-way receiver diversity- MIMO (Multiple Input Multiple Output) technology with beam-forming techniques such as 8T8R, Digital Signal Processing, Mobile Edge Computing (MEC) and new mobile technologies among others, the telecom industry is presently undergoing consolidation. These will accelerate the process of upgrading to 4.5G and 5G technologies in India and tremendously support the expected rapid growth in video and virtual reality applications with higher data rates, improved spectral efficiency, low latency and delays between click and download.

"We are delighted to announce 4.5G & 5G Innovation Summit 2017 that creates a unified platform for Indian telecom industry to address latest supporting technologies such as MIMO, NarrowBand-IoT, CloudRAN, CloudAIR, Ultra broadband, IMT 2020 and New Radio technologies, among others with a practical guide to LTE evolution in India towards a full 5G network. The summit will also include excellent networking opportunities, interactive panels and an exhibition area where major infrastructure providers and leading market players will unveil their cutting-edge technology products and services," says Anjani Kumar Singh, CEO, Nexgen Conferences.

According to recent report- "5G Planning, Strategy, and Market for Next Generation Apps and Services" by Research and Markets, the fifth generation (5G) of cellular networks is poised to transform communications, applications, digital content and commerce. What was once slow or perhaps bearable with respect to end-user Quality of Experience (QoE) will be lightning fast with 5G. Leading applications that will realize the benefits of ultra-low latency include industrial automation, robotics, and virtual reality. However, the report further asserts that 5G will not be commercially available until 2020, and the road to 5G will be based largely on ongoing efforts to optimize 4G apps and services via evolution of the LTE standard.

The summit is sponsored by well-known organizations such as Huawei, Oracle Communications, Juniper Networks, Infinera, Rosenberger, Nexus, and Deloitte and supported by 3GPP, TSDSI, and Cellular Operators Association of India (COAI).

Second Edition of Annual 4.5G & 5G Innovation Summit concludes on a successful note

Mumbai, Second Edition of Annual 4.5G & 5G Innovation Summit, an international Conference cum exhibition concludes on a highly successful note.The summit was organized by Nexgen Conferences, one of India's leading conferences & B2B event organizers. The day-long summit was held at ITC Maratha in Mumbai.

Addressing the audience,Mr. Radhey Shyam Sarda, Director – Wireless, Huawei Telecom, said,"In order to best meet the rising demands of Indian consumers for high-speed data transmission, we are leveraging key technologies such as massive MIMO,massive carrier aggregation, and advanced level of modulation.

Addressing key concerns of Indian telecom industry, Mr. Vivek Bhargava, Director – Product Marketing, Oracle said, "5G roadmap in India is dealing with a number of challenges including financial stress, high debt burden, inadequate investments in building and modernizing infrastructure, so and so forth. Mr. Pankaj Kitchlu, Systems Engineering Leader – Telecom, Juniper Networks said, "Being a fastest-ever growing market for smartphones and high-speed data throughput, India is driving opportunities to increase network capacity and improve the user experience. Mr. Jacques Lebosse, Engineer Director, Metro Solutions APAC, Infinera said, "In order to support cloud radio access networks (C-RANs), massive bandwidth with low latency, and high-capacity active mobile fronthaul services, we have expanded our Mobile Fronthaul and Mobile Backhaul Solutions as networks evolve to become 5G-ready.

Mr. Denish NG, Director, Marketing & Infrastructure Solutions, Rosenberger said, "At Rosenberger, we are expanding our entire portfolio of cutting edge active and passive wireless telecommunications solutions for leading telecom operators and hold a strong footprint as successful manufacturers of base station antennas in India.

Mumbai, April 17, 2017: Second Edition of Annual 4.5G & 5G Innovation Summit, an international Conference cum exhibition has concluded on a highly successful note. The summit was organized by Nexgen Conferences, one of India's leading conferences & B2B event organizers. The day-long summit was held at ITC Maratha in Mumbai.

The overriding theme of the Summit was to promote thought provoking keynote sessions, panel discussions and workshops, wherein key telecom industry professionals, stakeholders, thought leaders, analysts and users would be able to effectively participate and address the future of next wireless upgrade beyond LTE or 4G. It successfully served as a knowledge-exchange platform where both the attendees and speakers felt equally empowered in terms of gaining more impactful insights into the exciting world of ICT innovations and developments.

Addressing the audience, Radhey Shyam Sarda, Director – Wireless, Huawei Telecom, said, "In order to best meet the rising demands of Indian consumers for high-speed data transmission, we are leveraging key technologies such as massive MIMO, massive carrier aggregation, and advanced level of modulation. Apart from that, fiber penetration to the towers is one of the areas that we are paying attention to and that is the way forward when we are having the evolution of 4G to 5G."

Addressing key concerns of Indian telecom industry, Vivek Bhargava, Director – Product Marketing, Oracle said, "5G roadmap in India is dealing with a number of challenges including financial stress, high debt burden, inadequate investments in building and modernizing infrastructure, so and so forth. Launching advanced LTE network for Indian consumers would require considerable amount of time, capital investments and combined efforts from the entire telecom ecosystem."

Gartner estimates 20.8 billion internet enabled devices by 2020 – up from just 6.4 billion in 2016.

In order to match patch with the rest of the world in the adoption of 2G, 3G and 4G technologies, the Indian government wants the country to be an early adopter of 5G, which is expected to be commercially rolled out by 2020.

The day-long summit provided a highly interactive platform for over 30 CXO level speakers and various niche exhibitors from well-known organizations of the telecom industry to embrace the supporting network technologies such as MIMO, Digital Signal Processing, Cognitive Radio, and latest innovations. The exhibition area further allowed attendees to benefit from latest products and services offered by industry experts while exploring great business networking opportunities.

INNOVATION SUMMIT ENDS WITH PARTICIPANTS FEELING MORE EMPOWERED

Mumbai [India], April 17 (ANI-Newsvoir): The second edition of the annual 4.5G and 5G Innovation Summit, an international conference-cum-exhibition has concluded on a highly successful note, with a majority of participants saying that they now feel more empowered.

The summit was organised by Nexgen Conferences, one of India's leading conferences and B2B event organisers.

The day-long summit was held at ITC Maratha in Mumbai. The overriding theme of the summit was to promote thought provoking keynote sessions, panel discussions and workshops, wherein key telecom industry professionals, stakeholders, thought leaders, analysts and users would be able to effectively participate and address the future of next wireless upgrade beyond LTE or 4G.

It successfully served as a knowledge-exchange platform where both the attendees and speakers felt equally empowered in terms of gaining more impactful insights into the exciting world of ICT innovations and developments.
